de Agricultura

Santiago, Lunes 1° de agosto 2005

Invitamos a usted al Seminario Internacional "Recent Advances on Food Traceability Systems", que contará con la participación de destacados relatores nacionales y extranjeros. Este seminario forma parte del Proyecto ALCUEFOOD "From European fork to Latin American Farm. An innovative networking platform for EU-LAC partnerships to promote and enhance food quality and safety Research and Development" financiado por la Unión Europea.

Context:

The implantation of the article 18 of the general food law 178/2002 has conduced to a special attention on traceability with the obligation of implementing it on 1st. of January of 2005. The "hygiene package" (regulations 852-853-854/2004) derived of the "white book on food" completes it and gives new obligations new obligations on different points as:

- Integration of primary production and logistics, GPP, HACCP.
- Traceability of agricultural practices (pesticides & fertilizers).
- Official control organization (control frequency & risks)

Food and feed business operators shall be able to identify from whom and to whom their products have been supplied and to have systems and procedures in place that allow for this information to be made available to the authorities. The specific requirements in terms of hygiene rules are:

- Registration of establishments (for all food business and production)
- A health mark (by veterinary authorities, for food of animal origin)
- An identification mark (by companies, for food of animal origin)

There is no extraterritorial effect, but it is applicable for EU importers, and traceability could be required on a contractual basis.

The European Commission funded a specific support action ALCUEFOOD (2005-08), www.alcuefood.org -see abstract in annex- aims to catalyze the exchange of (policy, scientific, technological, commercial,..) information on food quality and safety between the EU and the Southern Cone region. A specific objective is to organize workshops in the Mercosur region, on key topics, such as traceability.

Objectives:

- diffuse information on advances in traceability systems in Europe and non EU countries.
- inform Latin American partners on the European research initiatives on traceability systems.
- share information on the "state of the art of traceability" and bottlenecks in South cone countries for the main agrichain (cereal, meat, fruit)
- Evaluate opportunities to diffuse and disseminate EU research projects results to the LA scientific community and/or food sector;
- define needs terms of scientific and technical cooperation for LA partners.
- prepare some joint proposals for joint research project or scientific exchanges (PhD student, post-doc,...)
- elaborate concept notes for specific needs in research on traceability systems in LAC countries.

Content

The first day will be opened to invited scientific and industrial Chilean partners. A participation of Canada representative will complete the panorama on advances on traceability systems.

The workshop will focused on three main topics:

- Fingerprints and analytical tools for generic traceability systems

- Geomatics for traceability of agricultural practices
- Information systems, including protocol interoperability and wireless "ad hoc" network for data acquisition in rural areas

General information

Language: Presentations in English

Coordinators of the workshop:

- Eugenia Muchnik - Fundación Chile - emuchnik@fundacionchile.cl
- Silvia Resnik - AUGM-UBA - silviaresnik@speedy.com.ar

PROGRAMA

Lunes, 1 de Agosto de 2005

- 09:00-
09:30 **Registration**
- 09:30-
09:40 **Opening session**
Dra. Eugenia Muchnik, Fundacion Chile, Chile
- 09:40-
10:00 **Traceability : the EU regulatory framework**
(General food law and 2004 "hygiene package" regulations)
Dr. Gérard Chuzel, ALCUE-FOOD coordinator, Cemagref, France
- 10:00-
10:30 **Agricultural geomatics and traceability: Challenges and adding value Prof Alain Viau,**
Laval University, Quebec, Canada
www.gaap.ulaval.ca
- 10:30-
11:00 Coffe Break
- Presentation of EU projects on traceability systems**
Geotraceability of agricultural products
11:00-
11:30 Michel Debord, Head of EU projects, CCI Gers, France
GeoTraceAgri EU project,
www.geotraceagri.net ; www.teleparc.net
- Presentation of experiences on traceability systems**
11:30-
12:00 CIdentification and traceability of animals: the ATQ system
Dra. Linda Marchand , Agri Traçabilité Québec, Laval, Canada
www.agri-tracabilite.qc.ca
- 12:00-
12:30 **The Argentinean experience in meat traceability**
Dr. Martín Irurueta, INTA, Argentina
- 12:30-
13:00 **General discussion**
- 13:00-
14:30 Lunch
- 14:30-
15:00 **Food genomics: DNA fingerprinting along the food chain**
Prof Elena Maestri, Parma University, Italy
DNA-TRACK & OLIV-TRACK EU projects
www.dsa.unipr.it/foodhealth/dna-track - www.dsa.unipr.it/foodhealth/oliv-track
- 15:00-
15:30 **Authentication techniques in geographical food authentication**
Dr Jurian Hoogwerff, IFR, United Kingdom
TRACE EU project

www.trace.eu.org

E-rural : Advances of rural wireless networks

15:30- Frederic Vigier, TETIS Research Unit, Cemagref-Cirad-Engref
16:00 Clermont Ferrand, France
TWISTER EU Project
www.twister-project.net

16:00- Coffe Break
16:30

16:30- **The Chilean experience on fruit traceability**

17:00 Dr. Edmundo Araya, Director General FDF (Fundación para el Desarrollo Frutícola), Chile

17:00- **Challenges for grain traceability in South cone countries**

17:30 Dra Silvia Resnik, AUGM, Buenos Aires University, Argentina

Conclusion session

17:30-

18:00 **Round table : challenges, opportunities and R&D needs**

Drs Eugenia Muchnik, Michel Debord, José Vargas Niello

18:00- **Possible next steps in light of ALCUEFOOD**

18:30 Information system on traceability: needs & requirements
Drs Gérard Chuzel & Martin Irurueta
